

TrekNet[®]

Visitor Tracking Solution TrekNet[®] VTS

Save time and resources to record information of all visitors who enter your organisation's premises with TrekNet[®] VTS. By eliminating the need for them to manually write their details on a log book, TrekNet[®] VTS's self registration mode allows them to perform easy data entry as they enter and leave your premises. Your organisation is also able to automate the process of a visitor's check-in and check-out accurately.

With the significant number of visitors that an organisation receives daily, it will be a concern if a certain visitor is unable to be traced or located immediately, should a crisis or pandemic takes place.

Thus, TrekNet[®] VTS would be a useful and affordable tool for organisations to keep accurate and important records of their visitors' information for easy contact tracing.
